

OneLogin Directory Integrations for Ellucian & Higher Education

Automate lifecycle management to accelerate onboarding and offboarding

Many IT teams struggle with managing third-party applications and making them work with existing infrastructure, especially when rolling out new technology. Identity is a critical connecting layer, but user info is often out of sync and inaccurate across multiple systems of record like Active Directory, LDAP, and Student Information Solutions (SIS). However, relying on manual processes and building custom integrations is time-consuming, expensive to maintain, and not scalable.

OneLogin Directory Integrations

OneLogin's cloud directory automates end-to-end user lifecycle management across a school's applications and infrastructure. OneLogin integrates and synchronizes data from Ellucian Banner SIS and Ellucian Colleague to IT directories like Microsoft Active Directory, LDAP, and G Suite and third-party applications. Manage your users, authentication policies, and access control from a single, intuitive web portal. For students, faculty, and staff, quick access to the applications they need is easy and secure through a centralized access portal.

Key benefits of OneLogin Directory Integrations

Synchronize clean data across multiple directories

Many schools leverage multiple directories to store and manage user information, such as Active Directory for faculty and Ellucian Banner for students. With a universal cloud directory, IT teams can avoid troublesome integration projects and quickly integrate and sync clean user data from Ellucian Banner with Active Directory, LDAP, or G Suite directories.

Enhance the user experience from day one

Many students, faculty, staff, and alumni require access to a large number of cloud applications from any location across a range of devices. Give end-users quick, secure access to critical systems, as well as Single Sign-On (SSO), to simplify authentication to business-critical apps every day.

Accelerate onboarding & offboarding processes

For most schools, onboarding and offboarding is resource-intensive and expensive. Manual processes are not secure and leave windows of time for terminated users to still have lingering access to sensitive applications. Improve IT team efficiency and substantially reduce tactical workload through automated identity workflows that scale with the dynamic nature of schools.

Protect user data effectively

Educational institutions handle a wide range of sensitive data, including Personally Identifiable Information (PII), student data such as financial aid, grades, test scores, and extremely valuable research. Ensuring proper access control is critical to preserving a secure and compliant institution. As a security-first company, data and privacy protection are our #1 priority.

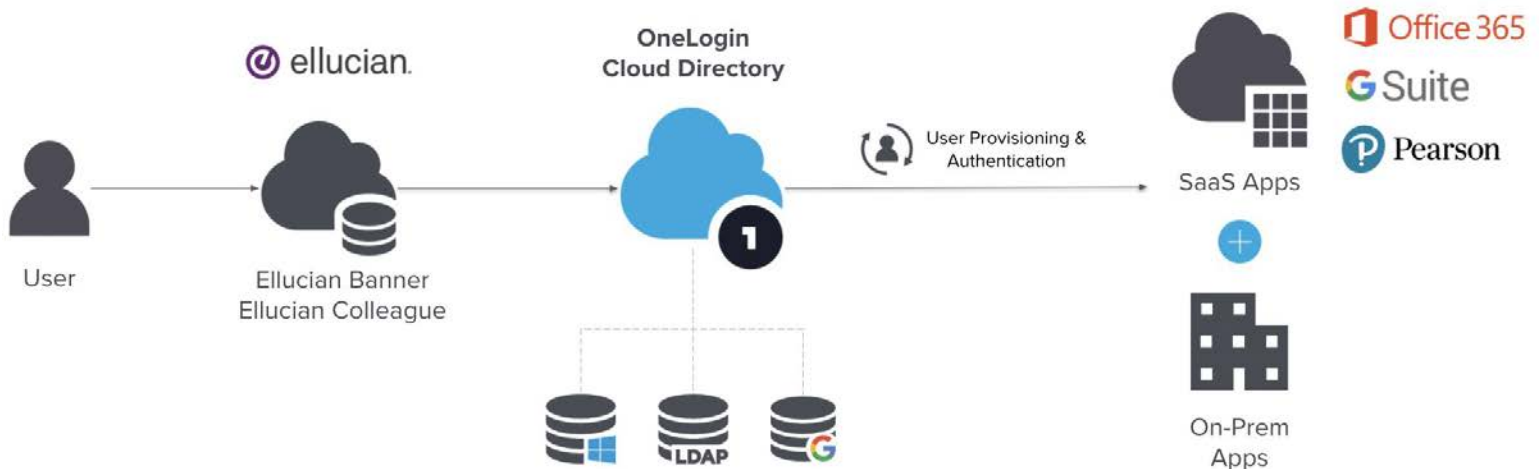

EU-U.S. Privacy Shield

“My challenge to the IT team was to integrate these disparate systems in such a way that our users perceive them as one coherent system. OneLogin has been a critical component in meeting this objective.”

BRENT HARRIS | Vice President for Information Technology, University of Mary Hardin-Baylor

How does OneLogin Directory Integrations work?

OneLogin Directory Integrations functionality includes:

- **Unified cloud directory**

OneLogin's unified cloud directory integrates with a range of directories including Ellucian Banner, Ellucian Colleague, Active Directory, LDAP, and Google G Suite, to synchronize user stores and provide a single source of truth. This means a centralized user store for simple identity management and accelerated user onboarding and offboarding.

- **Automated new user record mapping into existing directories**

Once personnel create a new user record in Ellucian Banner or Colleague, OneLogin maps the user record information to an existing organizational unit within the network. Custom user fields are synchronized with other apps and directories in real-time to improve automation and maximize productivity and security.

- **Automated user provisioning and access**

Eliminate unnecessary time and effort required to activate and deactivate profiles across multiple user management systems. Instantly grant and revoke user access to applications based on real-time user status and customized security policies defined in OneLogin.

- **Additional access controls and security**

Customize and manage application security from a central admin interface. Easily grant users, including students, faculty, and staff, access to applications efficiently through role-based access control as well as API-based integrations with applications. Employ policy-driven single sign-on (SSO) and multi-factor authentication (MFA) for enhanced identity assurance for sensitive applications and privileged users.
