

ACCELERATE YOUR CLOUD-FIRST STRATEGY WITH ONELOGIN FOR HUDDLE

Trust OneLogin to take complete control over Huddle access across your organization. OneLogin allows you to securely synchronize users in your corporate directory with your Huddle application in minutes. IT and security teams can quickly and easily provision and deprovision users to Huddle in real-time, create and enforce security policies, and add a second factor of authentication. Huddle end-users will enjoy OneLogin single sign-on across mobile, web and desktop to seamlessly and securely access their Huddle content.

Single Sign-On

OneLogin uses SAML 2.0 to sign users into Huddle. The standards-based SAML protocol uses digital signatures to establish trust between the identity provider and the application, eliminating user-managed passwords and the risk of phishing.

Scalable, Trustworthy and Secure

OneLogin supports complex directory infrastructures for some of the most demanding public companies in the world. Rest easy with redundant data centers in the US and Europe, massive scalable infrastructure, quarterly security reviews by iSEC partners, and 24/7 monitoring. 99.9% Uptime Guarantee.

Automated User Provisioning

OneLogin automatically creates, updates, deletes, suspends, and activates users in Huddle based on changes to security groups and user attributes in your corporate directory. OneLogin synchronizes users in real time, simplifying user administration, improving compliance, and providing IT with an effective user kill switch for when users leave the organization.

Multi-Factor Authentication

Multiple authentication factors provide an extra layer of protection so that a password breach isn't enough to compromise your private files. Use OneLogin's free smart phone app or a pre-integrated third-party solution from Duo Security, Google Authenticator, RSA or VASCO.

OneLogin Allows You to Leverage Your Existing Directory Infrastructure in Minutes
